CV-RAPS Program
Guest Speaker,
Rich Lougy, PhD
Psychologist & Author

"ADHD: A Survival Guide for Parents and Teachers"
and
"Teaching Young Children with ADHD"

What is Executive Functioning?
How does Executive Functioning Affect Learning?

The brain's executive functions organize, activate, focus, integrate and direct, allowing the brain to perform both routine and creative work. Lougy has treated and worked with thousands of children and adults with AD/HD and similar symptoms. After a stroke or traumatic brain injury, many executive functions of the brain are disrupted. You may notice that you blurt out thoughts without thinking about how deep it may hurt a loved one or interrupts or intrudes on other people.

Dr. Lougy has also written numerous articles on Executive Functioning and regularly presents at state and national conferences.

BRAIN VILLAGE at 4TH Annual Disability Fair
September 11, 2009
at Weber's Point Center, Stockton, CA

"Caring for the Caregiver" Symposium II
November 14, 2009

Keynote Speaker: **Dr. Gladys Taylor**, Caregiver and mom to famous brain scientist, stroke survivor and author of *Stroke of Insight*,
Dr. Jill Bolte Taylor
